

Dohyun Chung

Solutions Engineer · Enterprise SaaS · Bilingual KR/EN

leahchung99@gmail.com | Seoul, South Korea · Open to Remote | Portfolio | LinkedIn

SUMMARY

Bilingual (Korean/English) technical professional with 3+ years bridging engineering and business across global teams. Built an enterprise retail SaaS platform from zero to launch, serving as the technical bridge between 300+ end users, cross-border development teams, and business stakeholders. Proven ability to diagnose complex technical issues, translate them into actionable solutions, and drive resolution across teams spanning India and New York. Seeking to leverage hands-on technical depth and cross-cultural communication in a Solutions Engineer role.

EXPERIENCE

Software Engineer

Apr 2024 – Present

Kiss Products, Inc. — New York, NY

- Led the end-to-end launch of a Multi-tenant Enterprise Retail OS from zero to production; designed tenant isolation architecture that reduced partner onboarding from days to <30 minutes via automated API provisioning.
- Provided direct technical support for 300+ platform users — diagnosing system performance issues, SAP-to-platform data sync failures, and order processing errors; resolved critical incidents through root-cause analysis and cross-team coordination.
- Resolved escalating conflicts between India-based development vendors and US business stakeholders by redefining communication protocols and proposing alternative technical approaches, restoring team alignment and unblocking delivery.
- Designed and implemented an Atomic Transaction Flow (Order → Receiving → Invoice → Inventory) for a global sales platform; achieved 0% cross-entity data inconsistency and 80% reduction in warehouse task latency.
- Recovered a D-30 launch crisis by auditing architectural deviations; introduced Technical Design Doc (TDD) gates and quality review processes, resulting in zero repeat incidents in post-launch phases.

Front-end Engineer & PM

May 2023 – Apr 2024

24/7 Teach

- Drove UI/UX strategy and front-end development for Naomi AI, an AI-powered K-12 learning platform serving 3,000+ students; led accessibility compliance and usability across all student-facing interfaces.
- Partnered with CEO and Marketing to analyze conversion data; directly influenced feature prioritization roadmap to align product development with user retention objectives.
- Defined data retrieval requirements and collaborated with backend engineers to optimize API payloads; translated curriculum designer feedback and student engagement analytics into shipped product improvements.

Front-end Engineer Intern

Jan 2023 – Apr 2023

SkylT Services

- Engineered client-side features for a B2B logistics platform in React: inventory management and real-time shipment tracking.
- Defined API consumption patterns with backend engineers; delivered key client-facing dashboard on schedule under Agile sprints.

EDUCATION

B.A. in Computer Science & Sociology

Dec 2023

New York University

SKILLS

Languages Korean (Native) · English (Fluent)
Cloud & Data AWS · REST API Design · Microservices Architecture · SQL · SAP Integration
Solutions Technical Discovery · Root-Cause Analysis · Solution Design · Technical Demos · Cross-border Operations · Stakeholder Management

Product User Support · Agile / Scrum · Launch Readiness · PRD Writing · Vendor Management

Tools Jira · Figma · Notion
