

Dohyun Chung

Solutions Engineer · Enterprise Integration & Automation · Bilingual KR/EN

leahchung99@gmail.com | New York, NY · Relocating to Seoul | Portfolio | LinkedIn

SUMMARY

Bilingual (Korean/English) integration specialist with 3+ years on the customer side of enterprise system projects — connecting SAP, cloud platforms, and business applications while supporting 300+ users across the US and Europe. Experienced in turning complex technical problems into clear solutions that business teams can actually use. Driven to be the trusted technical advisor that helps customers adopt new platforms quickly and get real value from day one.

EXPERIENCE

Software Engineer & Technical Customer Lead

Apr 2024 – Present

Kiss Products, Inc. — New York, NY · #1 Nail Brand in the US · Global beauty leader in 100+ countries

- Serve as the primary technical contact for 300+ salespeople and retail store operators across the US and Europe — triaging daily issue reports across two live platforms (KISS Sales Platform and KRS POS), owning end-to-end resolution, and turning recurring field feedback into shipped improvements.
- Designed and launched a platform that lets multiple companies share the same infrastructure while keeping their data completely separate; cut new partner onboarding from several days to under 30 minutes.
- Broke a weeks-long standoff between 4 teams (vendor dev, vendor PM, US business, in-house engineering) by designing a delivery plan that worked for everyone — shipped on time and cut warehouse processing time by 80%.
- Caught a critical security issue 30 days before launch — one company's data was leaking into another's. Fixed it on time and introduced team review checkpoints that prevented any similar incident from happening again.

Software Engineer

May 2023 – Apr 2024

24/7 Teach

- Served as sole technical liaison between 3,000+ end users (educators, students) and engineering — translated classroom pain points into sprint-ready specs and shipped targeted improvements within 2-week cycles.
- Led front-end development and product roadmap for Naomi AI, an AI-powered K-12 platform; partnered with CEO to analyze conversion data and realigned feature priorities around user retention.
- Conducted direct user interviews with teachers and curriculum designers; turned qualitative feedback into measurable product improvements adopted by the full user base.

EDUCATION

B.A. in Computer Science & Sociology

Dec 2023

New York University
