

Dohyun Chung

Customer Success Manager · Experience Business & Value Realization · Bilingual KR/EN

leahchung99@gmail.com | New York, NY · Relocating to Seoul | Portfolio | LinkedIn

SUMMARY

Bilingual (Korean/English) customer success professional with 3+ years turning SaaS adoption into measurable business outcomes — owning the full experience from onboarding through value realization and renewal. Brings engineering depth to customer conversations: reads implementation data, joins technical calls without a solutions engineer, and translates platform capabilities into compelling business cases. Actively applies AI tools in daily work and is excited about where agentic AI is taking customer experience. Fluent in Korean enterprise culture and the decision-making dynamics of complex organizations.

EXPERIENCE

Software Engineer & Customer Success Lead

Apr 2024 – Present

Kiss Products, Inc. — New York, NY

- Drove platform adoption and value realization for merchant customers on KRS POS — owned the full cycle from onboarding through ongoing utilization, reducing time-to-value from several days to under 30 minutes by diagnosing and removing friction points in the setup flow.
- Broke a weeks-long standoff between 4 teams (vendor dev, vendor PM, US business, in-house engineering) by designing and leading a cross-functional delivery plan — aligned competing priorities across all parties and shipped on time.
- Owned platform health and adoption for 300+ internal users (salespeople, CS, admin, marketing) across the US — monitored usage, proactively surfaced issues before they escalated, and shipped targeted improvements based on direct user feedback.
- Diagnosed intermittent platform slowdowns and outages impacting 300+ users by analyzing server logs and database query patterns in SQL — identified an order confirmation cron job queue consistently hitting capacity and timing out. Adjusted processing limits and reordered queue logic to prioritize recent orders, fully resolving the issue and restoring platform reliability.
- Maintained the SAP ↔ internal platform integration — resolved data sync failures end-to-end, cleared record backlogs, and added observability to ensure operational continuity for business-critical workflows.

Software Engineer & Customer Success

May 2023 – Apr 2024

24/7 Teach — New York, NY

- Served as the primary bridge between 3,000+ end users (educators, students) and the engineering team — triaged issues, translated user needs into actionable specs, and ensured resolution within 2-week cycles.
- Championed customer feedback internally — conducted direct interviews with teachers and curriculum designers, synthesized qualitative insights into actionable product improvements, and tracked measurable impact on retention and engagement.

EDUCATION

B.A. in Computer Science & Sociology

Dec 2023

New York University

SKILLS

Languages	Korean (Native) · English (Fluent)
