

Dohyun Chung

Customer Success Manager · Payments & Client Activation · Bilingual KR/EN

leahchung99@gmail.com | New York, NY · Relocating to Seoul | Portfolio | LinkedIn

SUMMARY

Bilingual (Korean/English) customer success professional with 3+ years owning client activation and adoption across SaaS and payments products — taking full end-to-end ownership from first contact through sustained product usage. Moves fast with conviction, takes problems across team boundaries, and drives outcomes without waiting for permission. Data-driven in identifying at-risk accounts and activation blockers before they escalate. Uses AI tools daily to work smarter and serve customers more effectively.

EXPERIENCE

Software Engineer & Customer Success Lead

Apr 2024 – Present

Kiss Products, Inc. — New York, NY

- Drove client activation for merchant customers on KRS POS — a payments system for retail operators — owning the full journey from setup through first live transaction, and reducing time-to-activation from several days to under 30 minutes by diagnosing and removing friction points in the onboarding flow.
- Broke a weeks-long standoff between 4 teams (vendor dev, vendor PM, US business, in-house engineering) by taking full cross-functional ownership — designed and led a delivery plan that aligned competing priorities across all parties and shipped on time.
- Managed a book of 300+ internal users across the US — monitored usage patterns, proactively surfaced at-risk accounts before they escalated, and shipped targeted improvements based on direct user feedback.
- Diagnosed intermittent platform slowdowns and outages by analyzing server logs and database query patterns in SQL — identified an order confirmation cron job queue hitting capacity and timing out. Adjusted processing logic to fully resolve the issue and restore platform reliability.

Software Engineer & Customer Success

May 2023 – Apr 2024

24/7 Teach — New York, NY

- Served as the primary bridge between 3,000+ end users (educators, students) and the engineering team — triaged issues, translated user needs into actionable specs, and ensured resolution within 2-week cycles.
- Conducted direct interviews with teachers and curriculum designers to identify adoption barriers; turned qualitative feedback into measurable product improvements with impact on retention and engagement.

EDUCATION

B.A. in Computer Science & Sociology

Dec 2023

New York University
