

Dohyun Chung

Product Support Engineer · SaaS Troubleshooting & Systems Thinking · Bilingual KR/EN

leahchung99@gmail.com | New York, NY · Relocating to Seoul | Portfolio | LinkedIn

SUMMARY

Bilingual (Korean/English) technical support engineer with 3+ years owning complex SaaS issues end-to-end — investigating deeply rather than escalating fast, and communicating findings clearly to both engineering teams and non-technical users. Experienced debugging multi-system integrations across SAP, REST APIs, and data pipelines. Operates with full ownership in async environments and takes problems all the way through to resolution.

EXPERIENCE

Software Engineer & Technical Support Lead

Apr 2024 – Present

Kiss Products, Inc. — New York, NY

- Primary technical contact for external merchant customers on a newly deployed SaaS POS: investigate reported issues across the full stack, distinguish system failures from configuration and UX problems, and resolve under time pressure with direct impact on merchant operations.
- Built issue-response guides for the KRS POS and SAP-integrated sales platform — structured references covering failure modes, root causes, and resolution steps — so future team members can handle complex issues without starting from scratch.
- Sole technical support owner for 300+ internal users across the US: diagnose and resolve operational issues end-to-end, identify root causes in the data pipeline, and ship targeted fixes to prevent recurrence.
- Debugged and maintained the SAP ↔ internal platform data pipeline: traced sync failures end-to-end across systems, cleared record backlogs, and added observability to surface future issues proactively.

Software Engineer & Technical Support

May 2023 – Apr 2024

24/7 Teach — New York, NY

- Sole technical point of contact between 3,000+ end users (educators, students) and the engineering team — triaged reported issues, reproduced ambiguous behavior, and translated findings into actionable bug reports and specs.
- Identified recurring pain points through direct user interviews; diagnosed root causes and shipped fixes within 2-week cycles, with measurable impact on retention and engagement.

EDUCATION

B.A. in Computer Science & Sociology

Dec 2023

New York University

SKILLS

Languages	Korean (Native) · English (Fluent)
Troubleshooting	Root-Cause Analysis · Integration Debugging · Log Analysis · Incident Response · Bug Reproduction
Technical	REST APIs · SAP Integration · SQL · Data Pipelines · AWS · HTTP/API Debugging · Python · JavaScript/TypeScript
Communication	Technical Writing · Async-first Documentation · Cross-functional Collaboration · Stakeholder Updates
Tools	Jira · Figma · Notion · Git
