

Dohyun Chung

Technical Customer Support · eCommerce & Publishing Platforms · Bilingual KR/EN

leahchung99@gmail.com | Remote (NYC → Seoul) | Portfolio | LinkedIn

SUMMARY

Bilingual (Korean/English) technical support professional with 3+ years helping high-volume users and merchant customers resolve platform issues — reproducing ambiguous behavior, tracing root causes through logs and APIs, and explaining solutions clearly to developers, business stakeholders, and non-technical users. Background spans retail eCommerce operations (300+ store operators across the US and Europe), proactive issue detection, and knowledge-base enablement. Self-directed remote worker; uses AI tools daily to accelerate debugging, documentation, and workflow automation.

EXPERIENCE

Software Engineer & Technical Support Lead

Apr 2024 – Present

Kiss Products, Inc. — New York, NY · #1 Nail Brand in the US

- Primary technical contact for external merchant customers on KRS POS (retail point-of-sale platform) — triaged daily reports via email and internal channels, reproduced issues by testing API endpoints directly, and owned cases through to resolution or engineering escalation with clear reproduction steps.
- Built an automated observability tool for the Sales Platform — reads AWS logs, metrics, and database state, synthesizes anomalies into alerts, and routes them proactively. Reduced reactive support load by surfacing issues before customers reported them.
- Debugged SAP ↔ Sales Platform integration failures end-to-end — traced sync errors through logs, cleared backlogs, and added checkpoints so recurring issues are caught early; documented patterns in a shared integration FAQ.
- Resolved recurring OAuth/API access failures — reproduced 403 scope and token expiry errors, identified misconfigured permission grants, and restored daily customer access across the platform.
- Authored onboarding guides, incident post-mortems, and escalation criteria in a technical knowledge base — enabling teammates to resolve common merchant issues independently and shortening mean time to resolution.
- Used AI-assisted workflows to draft runbooks, summarize log patterns, and accelerate root-cause analysis on recurring ticket types.

Software Engineer & Technical Support

May 2023 – Apr 2024

24/7 Teach — New York, NY

- Technical liaison for 3,000+ end users on an AI-powered K-12 publishing platform — reproduced ambiguous behavior, traced issues to root cause, and translated findings into precise bug reports engineering could act on without follow-up.
- Built internal enablement documentation and a failure-mode knowledge base that shortened investigation time for the entire support team.

EDUCATION

B.A. in Computer Science & Sociology

Dec 2023

New York University

SKILLS

Languages	Korean (Native) · English (Fluent)
Support	High-volume Technical Support · Ticket Triage · Root-Cause Analysis · Knowledge Base · Customer Onboarding
eCommerce	Retail POS · Merchant Operations · Checkout & Order Flows · REST APIs · OAuth · SQL
Technical	JavaScript/TypeScript · Python · HTML/CSS · Linux · Git · AWS CloudWatch · Log Analysis
AI & Tools	AI-assisted Debugging & Documentation · Workflow Automation · Jira · Notion
