

Dohyun Chung

Customer Success Manager · Subscription Lifecycle & Adoption · Bilingual KR/EN

leahchung99@gmail.com | New York, NY · Relocating to Seoul | Portfolio | LinkedIn

SUMMARY

Bilingual (Korean/English) customer success professional with 3+ years managing subscription lifecycles end-to-end — from onboarding and adoption through long-term value realization. Background in Computer Science and Sociology gives a grounded perspective on how people and institutions actually adopt technology. Experienced developing success plans, executing business reviews, and coordinating cross-functionally to deliver measurable outcomes. Data-driven in identifying risks and translating usage signals into actionable recommendations. Actively applies AI tools in daily work to work smarter and serve customers better.

EXPERIENCE

Software Engineer & Customer Success Lead

Apr 2024 – Present

Kiss Products, Inc. — New York, NY

- Managed the full subscription lifecycle for external merchants on KRS POS — defined success plans, led onboarding, and drove platform adoption, reducing time-to-value from several days to under 30 minutes by diagnosing and removing friction points in the setup flow.
- Broke a weeks-long standoff between 4 teams (vendor dev, vendor PM, US business, in-house engineering) by designing and leading a cross-functional delivery plan — aligned competing priorities across all parties and shipped on time.
- Owned platform health and adoption for 300+ internal users (salespeople, CS, admin, marketing) across the US — monitored usage, proactively surfaced issues before they escalated, and shipped targeted improvements based on direct user feedback.
- Diagnosed intermittent platform slowdowns and outages impacting 300+ users by analyzing server logs and database query patterns in SQL — identified an order confirmation cron job queue consistently hitting capacity and timing out. Adjusted processing limits and reordered queue logic to prioritize recent orders, fully resolving the issue and restoring platform reliability.
- Maintained the SAP ↔ internal platform integration — resolved data sync failures end-to-end, cleared record backlogs, and added observability to ensure operational continuity for business-critical workflows.

Software Engineer & Customer Success

May 2023 – Apr 2024

24/7 Teach — New York, NY

- Drove adoption and retention across a platform of 3,000+ educators and students — surfaced usage barriers through direct user interviews, translated findings into product improvements, and closed the loop within 2-week cycles with measurable impact on engagement.
- Served as the primary liaison between end users and the engineering team — triaged issues, translated user needs into actionable specs, and ensured timely resolution to keep users active on the platform.

EDUCATION

B.A. in Computer Science & Sociology

Dec 2023

New York University

SKILLS

Languages	Korean (Native) · English (Fluent)
