

Dohyun Chung

Delivery Solutions Engineer · SaaS Integration & API Delivery · Bilingual KR/EN

leahchung99@gmail.com | New York, NY · Relocating to Seoul (Oct 2026) | Portfolio | LinkedIn

SUMMARY

Bilingual (Korean/English) engineer with 3+ years delivering SaaS/web integrations end-to-end — technical discovery, data flow design, REST API configuration, SQL and log-based troubleshooting, and customer-facing demos and training. Owns integration lifecycles from scoping through delivery, collaborates cross-functionally with engineering, product, and business stakeholders, and translates complex technical concepts for varied audiences. Korean citizen; available for hybrid work in Seoul.

EXPERIENCE

Software Engineer & Technical Integration Lead

Apr 2024 – Present

Kiss Products, Inc. — New York, NY

- Owned the SAP ↔ Sales Platform integration lifecycle — technical scoping, data flow mapping, API configuration, and log-based troubleshooting; added observability checkpoints so sync failures surface before they impact business operations.
- Primary technical contact for external merchant partners on KRS POS — led integration discovery, product demonstrations, and onboarding; reproduced reported issues by testing REST API endpoints directly and escalated to engineering with clear reproduction steps.
- Debugged OAuth and REST API failures end-to-end — reproduced 403 scope errors and token expiry issues, identified misconfigured permission grants, and resolved daily customer access complaints across the platform.
- Diagnosed customer-reported performance degradation by analyzing server logs and SQL query patterns — traced root cause to a batch job hitting queue capacity; adjusted configuration to fully restore platform reliability.
- Built an automated observability tool for the Sales Platform — reads AWS logs, metrics, and database state in real time, synthesizes anomalies into structured alerts, and routes them proactively to the team.
- Maintained integration documentation, onboarding guides, and incident post-mortems in a shared knowledge base — enabling CS and operations teams to resolve common issues independently.
- Aligned 4 cross-functional teams (vendor engineering, vendor PM, US business, in-house engineering) on a contested delivery plan — resolved competing priorities and shipped the multi-tenant platform launch on schedule.

Software Engineer & Technical Support

May 2023 – Apr 2024

24/7 Teach — New York, NY

- Technical liaison between 3,000+ end users and engineering — reproduced ambiguous behavior, traced issues to root cause via logs and API testing, and translated findings into precise bug reports with reproduction steps.
- Built internal enablement documentation and a knowledge base of failure modes and escalation criteria that shortened investigation time for the entire support team.

EDUCATION

B.A. in Computer Science & Sociology

Dec 2023

New York University

SKILLS

Languages	Korean (Native) · English (Fluent)
Integration	REST APIs · JSON · HTTP · Webhooks · OAuth · Data Flow Design · System Integration (SaaS/Web)
Data & Debug	SQL · Log Analysis · Root-Cause Analysis · API Troubleshooting · Configuration & Deployment Support
Technical	JavaScript/TypeScript · Python · HTML/CSS · AWS · Git · Linux
Customer-facing	Technical Discovery · Product Demos · Training Documentation · Cross-functional Collaboration · Stakeholder Communication
