

Dohyun Chung

Program Management · Cross-functional Delivery · H&B Tech · Bilingual KR/EN

leahchung99@gmail.com | New York, NY · Relocating to Seoul | Portfolio | LinkedIn

SUMMARY

Bilingual (Korean/English) software engineer with 3+ years owning the operational and delivery aspects of software projects in the H&B industry — aligning engineering, product, and business stakeholders around priorities, removing blockers, and shipping on time. Built and launched production platforms end-to-end, coordinated cross-functional delivery across competing teams, and continuously improved operational processes to keep pace with business requirements.

EXPERIENCE

Software Engineer & Technical Program Lead

Apr 2024 – Present

Kiss Products, Inc. — New York, NY (#1 nail brand in the US · H&B global leader)

- Broke a weeks-long standoff between 4 teams (vendor dev, vendor PM, US business, in-house engineering) by designing and leading a cross-functional delivery plan — aligned competing priorities across all parties and shipped on time.
- Built KRS POS from zero to production: designed the cloud architecture, presented solution designs to C-level stakeholders, and owned the full implementation cycle. Caught a critical multi-tenant data isolation issue 30 days before launch and introduced review checkpoints that reduced new partner onboarding from days to under 30 minutes.
- Owned platform health for 300+ internal users across the Sales Platform — monitored usage patterns, proactively surfaced issues before they escalated, and shipped targeted improvements based on direct stakeholder feedback.
- Coordinated the SAP ↔ Sales Platform integration across engineering and business teams: managed delivery milestones, resolved sync failures end-to-end, and added operational checkpoints to ensure ongoing reliability.
- Built an automated monitoring tool that reads server logs and database state in real time and routes structured alerts to the team — shifting support from reactive to proactive and reducing incident response time.
- Authored operational documentation including incident post-mortems, platform FAQ, and onboarding guides — standardizing processes and enabling the broader team to resolve recurring issues independently.

Software Engineer & Technical Operations

May 2023 – Apr 2024

24/7 Teach — New York, NY

- Served as the operational bridge between 3,000+ end users and the engineering team — triaged issues, translated user needs into actionable specs, and ensured resolutions were delivered within 2-week cycles.
- Built an internal knowledge base of failure modes, workarounds, and escalation criteria — standardizing the team's response to recurring issues and shortening investigation time across the organization.

EDUCATION

B.A. in Computer Science & Sociology

Dec 2023

New York University

SKILLS

Languages	Korean (Native) · English (Fluent)
Program Mgmt	Cross-functional Delivery · Stakeholder Alignment · Risk Identification · Status Reporting · SDLC
Technical	REST APIs · SQL · AWS · Python · JavaScript/TypeScript · Git · Linux
Operations	Process Improvement · Incident Response · Log Analysis · Monitoring & Alerting · Documentation
