SUMMARY

Technical Product Manager and Software Engineer with 3 years of experience delivering complex B2B platforms across retail, edtech, and logistics. Specializes in cross-cultural stakeholder management, ERP and API systems design, and full-cycle product delivery — from roadmap definition to production engineering.

EXPERIENCE

Technical PM & Software Engineer

Apr 2024 - Present

Kiss Products, Inc. — New York, NY

- Defined product vision and governed launch readiness for a multi-tenant enterprise retail OS; designed the multi-tenant isolation architecture, reducing tenant onboarding from days to <30 minutes via single API-driven provisioning.
- Served as sole communication hub across a 24-person cross-functional program (India vendor ×10, in-house dev ×3, business ×10); resolved conflicts between 4 stakeholder groups with competing priorities and maintained trust with all parties throughout.
- Recovered a D-30 launch crisis: identified critical vendor deviation from architecture spec, led component rewrite with in-house dev team, and shipped on schedule; introduced Design Doc gates and scope checklists — zero repeat incidents in Phase 2.
- Engineered centralized export pipeline across 20+ modules; reduced data export from 4+ manual steps to 1-click, eliminating timeout failures on datasets of 50k+ rows.
- Designed and co-implemented atomic transaction flow (Order → Receiving → Invoice → Inventory); achieved 0% cross-entity data inconsistency and ~80% reduction in receiving task time.
- Owned full-cycle delivery of an internal field sales platform serving hundreds of salespeople; engineered SAP-integrated order entry and real-time inventory visibility, and served as sole PM and developer for ongoing feature requests and CRM capabilities.

Front-end Engineer & PM

May 2023 - Apr 2024

24/7 Teach

- Drove UI/UX strategy and front-end development for Naomi AI, an AI-powered K-12 learning platform serving 3,000+ students; led accessibility compliance and usability across all student-facing interfaces.
- Partnered with CEO and Marketing to analyze conversion data; directly influenced feature prioritization roadmap to align product development with user retention objectives.
- Defined data retrieval requirements and collaborated with backend engineers to optimize API payloads; translated curriculum designer feedback and student engagement analytics into shipped product improvements.

Front-end Engineer Intern

Jan 2023 - Apr 2023

SkyIT Services

- Engineered client-side features for a B2B logistics platform in React: inventory management and real-time shipment tracking.
- Defined API consumption patterns with backend engineers; delivered key client-facing dashboard on schedule under Agile sprints.

EDUCATION

B.A. in Computer Science & Sociology

Dec 2023

New York University

SKILLS

Product	Technical PM · Roadmapping · Stakeholder Management · Agile / Scrum · Vendor Management · API Design · Launch Readiness · PRD Writing · Functional Specification
Engineering	Full-Stack Development · REST API Design · SQL · Data Visualization · Open Source Platform Development
Tools	Jira · Figma · Notion
Languages	Korean (Native) · English (Fluent)
