

Dohyun Chung

Solutions Engineer · Cloud & Enterprise SaaS · Bilingual KR/EN
leahchung99@gmail.com | Seoul, South Korea · Open to Remote | Portfolio | LinkedIn

SUMMARY

Bilingual (Korean/English) technical professional with 3+ years of customer-facing engineering across global teams. Serve as the primary technical point of contact for 300+ enterprise platform users — diagnosing production issues, driving root-cause resolution with cross-border development teams, and translating complex technical constraints into business-ready solutions. Built and launched an enterprise SaaS platform (AWS, Snowflake) from zero to production while managing four stakeholder groups across India, New York, and Korea. Passionate about helping customers adopt technology and achieve their business goals.

EXPERIENCE

Software Engineer & Technical Customer Lead Apr 2024 – Present

Kiss Products, Inc. — New York, NY

- Serve as the primary technical point of contact for 300+ retail platform users — fielding daily issue reports from field sales teams, diagnosing SAP-to-platform data sync failures and order processing errors, and driving resolution through root-cause analysis and cross-team coordination.
- Lead a Product Information Management (PIM) initiative using AWS and Snowflake to centralize company-wide product data into a single platform; own end-to-end development and serve as the main liaison for employee onboarding, training, and ongoing support.
- Designed multi-tenant architecture for an Enterprise Retail OS and led launch from zero to production; reduced partner onboarding from days to <30 minutes via automated API provisioning.
- Bridged four conflicting stakeholder groups (India vendor dev, India vendor PM, US business team, in-house engineering) — translated business requirements into technical specs and brokered phased delivery plans that unblocked development.
- Designed and implemented an Atomic Transaction Flow (Order → Receiving → Invoice → Inventory); achieved 0% cross-entity data inconsistency and 80% reduction in warehouse task latency.
- Recovered a D-30 launch crisis by auditing architectural deviations; introduced Technical Design Doc gates and quality review processes, resulting in zero repeat incidents post-launch.

Front-end Engineer & Product Manager May 2023 – Apr 2024

24/7 Teach

- Led front-end development and product strategy for Naomi AI, an AI-powered K-12 learning platform serving 3,000+ students; gathered feedback directly from teachers and curriculum designers to drive feature improvements.
- Served as technical liaison between end users (educators, students) and the engineering team — translating user-reported issues and feature requests into prioritized development tasks.
- Partnered with CEO and Marketing to analyze conversion data; influenced the product roadmap to align development with user retention and adoption goals.

Front-end Engineer Intern Jan 2023 – Apr 2023

SkyIT Services

- Built client-facing inventory management and real-time shipment tracking features for a B2B logistics platform in React.
- Defined API consumption patterns with backend engineers; delivered key dashboard on schedule under Agile sprints.

EDUCATION

B.A. in Computer Science & Sociology

New York University
Dec 2023

SKILLS

Languages Korean (Native) · English (Fluent)
Cloud & Data AWS · Snowflake · REST API Design · SQL · Microservices Architecture · SAP Integration · Data Pipelines
Technical Python · JavaScript/TypeScript · React · HTTP/API Troubleshooting · Web Application Architecture
Customer-facing Technical Troubleshooting · Root-Cause Analysis · Solution Design · Technical Presentations · Customer Onboarding · Cross-border Stakeholder Management
Product & Process Agile / Scrum · PRD Writing · Launch Readiness · Vendor Management
Tools Jira · Figma · Notion · Git
